

- Configured Spring Boot to connect with a MySQL database using application.properties.
- Converted the Student class into a JPA Entity using @Entity, @Id, and @GeneratedValue.
- Created StudentRepository by extending JpaRepository to perform CRUD operations without writing SQL queries.
- Modified the Service layer to use Spring Data JPA methods (save(), findAll(), findById(), deleteById()) instead of an in-memory List.
- Successfully tested the REST APIs using Postman and verified that student records were stored in the MySQL database.

Configured Spring Boot to connect with a MySQL database using application.properties

- Successfully tested the REST APIs using Postman and verified that student records were stored in the MySQL database.
